[SABRISAWAHA](#)

Backend Web Developer with expertise in Laravel and NodeJS. Proven track record in delivering scalable and efficient web solutions, with notable problem-solving skills on Codeforces. Skilled in translating complex technical challenges into clear development strategies, ensuring effective team collaboration and client satisfaction.

Skills

- Laravel
- Data Structures and Algorithms
- Problem Solving Skills
- Version Control Systems
- Data Base
- Debugging and Testing

Experience

JAN 2023 – PRESENT

Freelancing

I have developed several APIs, including:

- **Property listing API:** This API enables users, including brokers, to access property data and details such as prices, locations, and specifications.
- **Task Management System API:** Streamlines task organization, assignment, and tracking to enhance team productivity.
- **E-commerce Store API:** Facilitates online store operations including product listing, inventory management, and order processing.
- **Transportation Company API:** Optimizes transportation logistics through vehicle tracking, route scheduling, and booking management.
- **Billing System API:** Manages invoicing and payment processing.
- **Blog:** Developed a blog platform with enhanced features to improve user experience like advanced search capabilities and dynamic filtering options, allowing users to easily navigate through content based on categories and tags.

JAN 2022 – OCT 2022

Receptionist

- Directed visitors to the appropriate person and office.
- Answered, screened, and forwarded incoming phone calls.

- Provided basic and accurate information in-person and viaphone/email.
- Maintained appointment diary either manually and electronically.
- Received commendations for consistently maintaining a high level of customer service.

MAY 2020 – JAN 2021

Sales

- Assisted in the sales team in a supermarket.
-

Education

2019-2024

Bachelor of Control and Automation Engineering

Aleppo University

- This degree emphasizes the design, implementation, and management of automated control systems across various industries, integrating principles from electronics, mechanics, and computing to optimize efficiency and productivity.
 - Graduation Project:
I controlled the ball and beam system by replacing the PID controller with an artificial intelligence network that possesses a specialized training function designed to orient and train the network for balancing the ball in the middle of the beam.
-

Courses and Certificates

- Laracasts: laravel 8 from scratch.
 - Laracasts: laravel 11 in 30 days.
